

Instructions

TetraPlant® Crypto

Promotes lush, healthy plant growth

Gravel fertilizer tablets for all freshwater aquariums

Crypto will be absorbed long term through the roots of the plants.

It provides iron and other essential trace elements in a complex compound form. This ensures that the nutrients are available to the plants for a prolonged period of time.

Crypto activates biological gravel conditions which lead to lush, healthy plant growth and increased root formation. It does not add nitrate or phosphate, avoiding over-fertilization of the water and unwanted algae growth.

Application:

1 tablet per 20 litres (approx. 5 gallons) of aquarium volume for initial fertilization

For re-fertilization 1 tablet per 40 litres (approx. 10 gallons) at each partial water change

Crush the tablets and press into the substrate directly at the plant roots.

Keep out of reach of children!
