

Instructions

TetraPlant[®] PlantaMin

Promotes lush, healthy plant growth

- Acts fast, absorbed quickly through leaves
- Provides iron and other essential trace elements
- Without nitrate or phosphate

Liquid plant fertiliser for all freshwater aquariums

Splendid, lush green water plants

TetraPlant[®] PlantaMin allows your water plants to grow luxuriously and so creates an attractive, healthy aquarium. Vigorous plant growth improves and maintains the biological balance in the aquarium.

How PlantaMin works

- Intensive fertilization with (iron and other essential trace elements (e.g. manganese), as well as important nutrients (e.g. potassium).
- Strengthen the plants by supplying them with long-term effective nutrients.
- Lush green leaves due to the promotion of chlorophyll formation.
- No water pollution and no unnecessary algae growth due to the lack of nitrate and phosphate.

Easy application

Add 5 ml to every 10 litres of aquarium water (1 subdivision of the measuring scale corresponds to 10 ml)

- for setting up aquariums
- whenever water is partially changed

We recommend a regular 4 week refertilisation with 5 ml for every 20 litres of aquarium water.

Tip:

All TetraPlant[®] plant products are ideally suited, simple and safe to use and produce the most optimal effects when their usage is combined.

Keep out of reach of children!
