

Instructions for Use

TetraAqua® TetraVital®

More vitality for ornamental fish

- Supplements natural B-vitamins and iodine
- Increases the vitality and splendid colouring of your ornamental fish
- With multivitamin complex

For all freshwater aquaria

Vitality for your ornamental fish

TetraAqua® TetraVital® supplements important trace elements, which are lacking in tap water, from the native biotope of ornamental fish, hence adjusting the aquarium water to the natural environment. Your ornamental fish are then able to live in surroundings identical to nature, promoting their well-being.

How TetraAqua® TetraVital® works

- TetraVital produces a species-typical biological balance, creating a natural habitat.
- The vitality and well-being of your ornamental fish are strengthened by naturally active B vitamins and iodine.
- Vitamin B promotes lush plant growth

Easy to Use

Add 5 ml per 10 litres of aquarium water.

- If the fish are under stress or if the biological activity in the aquarium ecosystem is too high, we recommend using twice the recommended dosage.
- Repeat every four weeks.

Tip:

Systematised TetraAqua® water care products: High-quality care products are required for a perfect aquarium. This is why we recommend using TetraAqua® products, which are optimally adjusted to one another.
